IT Acceptable Use & Support Guide

Accounts, devices, software, access requests, and troubleshooting

Document ID	IT-USE-003
Audience	All employees; technical details for IT staff
Version	1.0 — Demo
Owner	People Operations / relevant department
Status	Sample content — approval required

Important: Fictional sample company and policy pack created for OnboardIQ demonstration and ingestion testing. These documents are not legal advice and are not actual company policies. Replace with approved company content before real use.

1. Purpose and scope

- This guide describes sample expectations for using company-managed devices, accounts, networks, and software. The actual IT team must replace these examples with its approved standards.

2. Account security

- Use a unique password for your company account. Do not reuse a personal password.
- Enable multi-factor authentication and never approve a sign-in prompt you did not initiate.
- Do not share passwords, API keys, recovery codes, session cookies, or access tokens with anyone.
- If you suspect account compromise, use the approved incident channel immediately and follow instructions to secure the account.

3. Devices and software

- Use company-managed devices for work requiring access to internal systems unless an approved exception exists.
- Install software only from approved sources and follow the IT team's process for administrator access.
- Keep operating systems, browsers, endpoint protection, and required applications updated.
- Do not disable security controls or connect unknown removable media to company devices.
- Lock your screen whenever you leave your workstation. Keep devices physically secure during travel.

4. Access requests

- Submit requests through the designated service portal and include the business reason, system, requested role, manager approval if required, and duration if temporary.
- System owners should approve access based on job responsibilities and the principle of least privilege.
- Do not use another employee's account to bypass an access restriction.
- Access should be reviewed when an employee changes roles and removed when no longer required.

5. Service Desk workflow

Priority example	Example	What to include
Critical	Suspected widespread outage or active security incident	Immediate impact, affected systems, time observed; use emergency channel
High	Unable to perform a core job function	Error message, business impact, troubleshooting tried
Normal	Software request or routine issue	Device, app, steps to reproduce, screenshot without secrets
Low	General question or planned improvement	Desired outcome and timing

- Priority definitions are illustrative. Follow the actual service desk's severity matrix and emergency instructions.

6. Basic troubleshooting

- Check whether the issue affects one application or multiple services.
- Record the exact error text, time, device, application version, and steps that led to the problem.
- Try approved basic steps such as restarting the application, checking the network, or signing in again only when safe to do so.
- Do not repeatedly retry a potentially compromised account or delete logs needed for investigation.
- Attach screenshots only after removing personal information, passwords, tokens, customer data, and confidential content.

7. Remote work and data handling

- Use approved VPN or secure access methods where required.
- Avoid public Wi-Fi for sensitive work unless the approved security controls are in place.
- Store company files in approved locations; do not forward internal documents to personal email or unapproved storage.
- Report lost devices promptly, even if the device is believed to be encrypted.

End of IT Acceptable Use & Support Guide. This is fictional demonstration content for OnboardIQ.
