Summary

AI & Data Science engineering student with hands-on experience in full-stack development and building AI-powered applications. Skilled in developing REST APIs, working with databases, and building backend services using Python, JavaScript, and Java. Experienced in building RAG-based applications, multi-agent AI systems using LangChain and LangGraph, and event-driven microservices using Kafka. Familiar with vector databases, LLM integration, Docker, and AWS deployment.

Education

Vivekanand Institute of Technology, Mumbai *2024 – 2028*
B.E. in Artificial Intelligence and Data Science **CGPA: 8.78/10**

D.J. Ruparell College, Mumbai *2024*
Higher Secondary Certificate (HSC) **87%**

O.L.G.C. High School, Mumbai *2022*
Secondary School Certificate (SSC) **94%**

Professional Experience

Plasma Tech *Full Stack Intern Nov 2025 – Feb 2026*

- Developed reusable React components and worked on REST APIs and database design to build and improve full-stack application features.

AI CoLegion *Technical Officer Oct 2025 – Apr 2026*

- Collaborated with senior team members to organize technical workshops and hackathons, helping students learn new technologies and improve their technical skills.

Projects

OnBoardIQ – New Joiner Experience AI Platform *Python, FastAPI, Node.js, Kafka, Qdrant, AWS*

- Launched an AI-powered onboarding tool that integrated feedback mechanisms for continuous improvement, resulting in a 15% increase in the quality of training materials based on employee input and engagement metrics.
- Implemented a Kafka-driven ingestion design: Node.js publishes document events and a Python worker processes documents, chunks text, creates embeddings, and indexes content in Qdrant; role/department metadata supports access-aware retrieval.
- Deployment stack includes AWS EC2, Nginx, and HTTPS. Add S3/CloudFront only if they were actually used for this project.

CodePilot AI – Multi-Agent Code Assistant *Python, LangChain, LangGraph*

- Building an AI-powered coding assistant using LangChain and LangGraph to analyze bugs, generate code patches, improve code quality, and generate project documentation.
- Designed a graph-based multi-agent architecture with an orchestrator that routes tasks to specialized agents, enabling modular code analysis, patch generation, and validation workflows.

HealthyCare – AI Fitness Microservices *Spring Boot, Kafka, MongoDB, Gemini*

- Built an event-driven workflow where a fitness Activity Service publishes events to Kafka and an AI Service generates personalized recommendations and safety tips, storing results in MongoDB; a Config Server centralizes configuration.

Technical Skills

Languages: Python, Java, JavaScript, SQL
Full Stack: React.js, HTML, CSS, Tailwind CSS, Node.js, Express.js, Spring Boot, REST APIs, FastAPI
AI Engineering: RAG, embeddings, semantic search, LangChain, LangGraph, multi-agent systems, sentence-transformers, prompt engineering, LLM integration
Data & Infrastructure: Qdrant, Chroma, MongoDB, PostgreSQL, MySQL, Kafka, Docker, AWS EC2, Nginx, Git/GitHub
Core Concepts: DSA, OOP, microservices, event-driven architecture, authentication, RBAC

Certifications

- Free Full Stack Java Developer Course – Simplilearn SkillUp
- Augment Your LLM Using Retrieval-Augmented Generation – NVIDIA
- Introduction on Generative AI – Microsoft
- Build and Ship Cloud-Native Python Apps – JetBrains Academy
