ISS ONBOARD / ONBOARDIQ

Employee Guidance Guide

A practical guide to getting started, completing onboarding, finding company information, and using the AI assistant responsibly.

YOUR FIRST STEPS

01 Sign in and check your profile

02 Review your assigned onboarding tasks

03 Read the policies and guides you can access

04 Ask the AI assistant when you need help

Prepared for employees using the OnboardIQ intelligent workspace. Use this guide alongside your organization’s official policies and instructions.

1. Welcome to OnboardIQ

OnboardIQ is a workspace designed to help new employees navigate the onboarding process. It brings together assigned tasks, approved company documents, training resources, and an AI assistant in one place.

> **Your dashboard is your starting point. Check it regularly for assigned tasks, updates, and links to resources that are relevant to your role.**

What you can use it for

- **Stay organized:** see what you need to do and monitor your progress.
- **Learn company processes:** read published policies, guides, and training materials you are authorized to access.
- **Get help:** ask the AI assistant questions about available company information.
- **Find technical guidance:** use approved IT guides and follow the company's access-request process.

2. Your first-day checklist

STEP	ACTION	WHAT TO DO
01	**Sign in**	Use the account and sign-in method provided by your organization. Never share your password or verification code.
02	**Review your profile**	Check that your name, job title, department, and joining details are correct. Contact HR if something needs correction.
03	**Open your dashboard**	Review required tasks, deadlines, estimated completion times, and any instructions attached to each task.
04	**Read key documents**	Start with the employee handbook, workplace policies, security guidance, and role-specific materials assigned to you.
05	**Set up your tools**	Follow the approved IT instructions for email, device setup, VPN, collaboration tools, and development software where relevant.
06	**Ask for help early**	Contact HR for onboarding or policy questions and IT for device, account, or software issues.

3. How to complete onboarding tasks

The Tasks area lists activities assigned to you. A task may be a policy review, a training module, a meeting, or a technical setup step.

Recommended process

- Open a task and read its title, description, deadline, and completion instructions.
- Complete the activity using the linked official resource or the instructions provided.
- Update the task status in the platform when the activity is complete, if the option is available.
- If a task requires proof or manager approval, submit the requested evidence and wait for confirmation.
- If you cannot complete a task on time, contact the assigned owner or HR rather than marking it complete.

Only mark a task complete when you have actually completed the required activity. Some tasks may need verification by HR or IT.

4. Finding documents and policies

Use the Documents area to search for policies, guides, and onboarding resources. Documents may be organized by type, department, publication status, or other filters.

Good document-search habits

- Search using clear terms, such as “leave policy,” “VPN setup,” or “expense reimbursement.”
- Check the document title, department, version, and last-updated date before relying on it.
- Prefer the latest published version. If two documents conflict or appear outdated, ask HR or the document owner.
- If you cannot see a document, you may not have permission to access it. Request access through the appropriate company process.
- Do not forward confidential documents or store them in unapproved personal accounts or locations.

5. Using the AI assistant

The AI assistant can help you understand authorized company documents and locate relevant guidance. It should be treated as a support tool, not as a replacement for official approvals or professional judgment.

How to get useful answers

- Ask a specific question and include relevant context, such as your department or the task you are working on.
- Ask the assistant to identify the source document or provide citations so you can verify the answer.
- If the answer is unclear, ask a follow-up question or open the cited document directly.
- For employment decisions, sensitive HR matters, security incidents, or exceptions to policy, confirm with the responsible team.

AI answers can be incomplete or mistaken. Verify important details against the current official document or the appropriate HR/IT contact.

Examples of useful questions

TOPIC	EXAMPLE QUESTION
Company policies	“Where can I find the current leave policy, and what does it say about requesting leave?”
Technical setup	“Show me the approved steps to configure the company VPN.”
Onboarding	“Which required onboarding tasks do I still need to complete?”
Training	“Summarize the key points in the security awareness guide and cite the source.”

6. IT requests and technical support

If you need a new account, software, device support, VPN access, or permission to use an internal application, follow your organization's approved IT request process.

Before submitting a request

- Choose the correct request category and explain what you need and why.
- Include the application or system name and any relevant error message, without including passwords or secret tokens.
- Provide business context and the level of access required; request only what you need for your role.
- Track the request status and respond if the IT team asks for more information.
- Do not attempt to bypass access controls or use another employee's account.

7. Security, privacy, and responsible use

Protect company and personal information while using OnboardIQ and other company systems.

AREA	GUIDANCE
Credentials	Never share passwords, one-time codes, private keys, API keys, or recovery codes with anyone or in AI chat.
Sensitive data	Do not paste confidential customer data, employee records, financial details, or restricted business information into tools unless your company explicitly approves that use.
Access control	Access only documents and systems authorized for your role. Ask for permission if access is needed for legitimate work.
Suspicious activity	Report unexpected sign-in prompts, suspicious links, lost devices, or possible data exposure using the company's security process.
Document handling	Use approved storage and sharing channels. Follow the document's classification and handling instructions.
Accuracy	Verify important AI-generated guidance and do not treat a generated response as an official approval.

8. Who should you contact?

CONTACT	CONTACT THEM FOR	EXAMPLES
HR / People team	Employee onboarding and policy clarification	Incorrect profile details, leave-policy questions, onboarding deadlines, workplace policies
IT support	Accounts, devices, applications, and technical access	VPN issues, laptop setup, email problems, software or repository access
Manager / team lead	Role expectations and team-specific work	Project access context, team processes, priorities, role-specific training
Security team	Suspected security or data incidents	Phishing, suspicious login activity, lost device, accidental data sharing

9. Your first-week checklist

Use this checklist to keep your onboarding on track. Your actual tasks and deadlines may differ by role and organization.

- ■ I can sign in and access my employee dashboard.
- ■ I have reviewed my profile and reported any incorrect details.
- ■ I understand my assigned onboarding tasks and deadlines.
- ■ I have read the key policies and role-specific guides assigned to me.
- ■ I have completed or requested help with required IT setup.
- ■ I know how to ask the AI assistant a question and verify its sources.
- ■ I understand how to request access to documents or systems I need.
- ■ I know how to contact HR, IT, my manager, and the security team.

If you are unsure about a policy, access permission, or required task, ask the responsible team. It is better to clarify than to guess.

Quick reference

I need to…	Start here
Check my onboarding progress	Dashboard → My Tasks
Find a policy or guide	Documents → Search / Filters
Understand a company document	Ask ISS AI → Request source references
Request software or system access	IT Access Portal / approved IT workflow
Resolve an HR or profile question	HR / People team

Document note: This guide is a general onboarding aid for the OnboardIQ platform. It does not establish company policy or replace official instructions. Organization-specific contacts, deadlines, and procedures should be added by your HR or IT administrator.
